

Brainstorming & Idea Prioritization

Date	15 March 2024
Team ID	xxxxxx
Project Name	Credit Card Approval Prediction
Maximum Marks	3 Marks

Step 1: Brainstorm and Idea Listing

Each team member lists out as many ideas as possible without judging them at this stage.

S.No	Team Member	Idea / Suggestion	Category	Group No.
1	Team Member 1	Build a Machine Learning classification model (e.g., Random Forest or XGBoost) to predict the probability of credit card approval based on customer demographics and financial history.	Machine Learning	1
2	Team Member 1	Develop an automated data preprocessing pipeline to handle missing values, encode categorical variables, and scale numeric features in raw applicant datasets.	Data Engineering	1

3	Team Member 1	Create a web-based dashboard interface for bank agents to manually input applicant details and receive real-time approval predictions.	App Development	2
4	Team Member 1	Implement an Explainable AI (XAI) module using SHAP values to explain to users why their credit card application was approved or rejected.	Model Explainability	1

Step 2: Idea Prioritization

Rate each grouped idea on feasibility and importance, then select the final idea(s) to move forward with.

Group No.	Final Idea	Feasibility (High/Medium/Low)	Importance (High/Medium/Low)	Priority	Selected (Yes/No)
1	Build an end-to-end Machine Learning classification model with automated preprocessing and explainability to predict credit card approvals.	High	High	1	Yes
2	Develop a web-based dashboard interface for manual data entry and real-time prediction by bank agents.	Medium	Medium	2	No
