

Date	15 March 2026
Team ID	xxxxxx
Project Name	Credit Card Approval Prediction
Maximum Marks	5 Marks

Problem-Solution Fit Canvas:

Use the framework below to ensure your proposed solution accurately addresses the root causes, behaviors, and limitations of your target audience.

1. CUSTOMER SEGMENT(S) [CS] Individuals with a "thin" credit file (young professionals, immigrants) seeking financial independence. Bank agents reviewing applications.	6. CUSTOMER LIMITATIONS [CL] Lack of extensive credit history. May not have high-value assets. Bank agents have limited time to manually review borderline cases.	5. AVAILABLE SOLUTIONS [AS] Traditional FICO Models: Pros: Standardized. Cons: Rigid, excludes non-traditional data. Manual Underwriting: Pros: Thorough. Cons: Slow, prone to human bias.
2. PROBLEMS/PAINS + FREQUENCY [PR] Pain: Frequent, unexplained rejections by automated banking systems. Frequency: High (every time they apply).	9. PROBLEM ROOT / CAUSE [RC] Legacy scoring models fail to leverage alternative financial health indicators (e.g., steady employment, utility payments) and operate as "black boxes" lacking transparency.	7. BEHAVIOR + INTENSITY [BE] Applying for multiple credit cards out of desperation, which results in "hard inquiries" that further damage their credit score. (High intensity).

3. TRIGGERS TO ACT [TR]

Needing credit for emergencies, wanting to build a credit score for future property loans, or receiving an automated rejection letter.

4. EMOTIONS BEFORE/AFTER [EM]

Before: Hopeful, anxious.

After (Current): Frustrated, excluded, confused.

After (Proposed): Empowered, informed, fairly treated.

10. YOUR SOLUTION [SL]

An end-to-end Machine Learning classification system that predicts credit card approval probabilities by incorporating alternative financial data.

Coupled with an Explainable AI (SHAP) module, it provides both the bank and the applicant with transparent, bias-free, and actionable reasons for the decision.

8. CHANNELS OF BEHAVIOR [CH]

Online: Banking websites, financial comparison portals (e.g., NerdWallet).

Offline: Visiting local bank branches for manual assistance.
